BRIAN YILDIRIM

Irvine, CA | (201) 668-0335 | byildiri@uci.edu | GitHub | LinkedIn | Portfolio

EDUCATION

University of California, Irvine - B.S. in Computer Science — Expected Jun. 2027 | Irvine, CA
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Systems Engineering, Software Testing, Statistical Data Analysis, Discrete Math, Calculus II, Linear Algebra

EXPERIENCE

Software Engineering Intern | Toros Tile — Jun. 2026 - Sep. 2026 | Fairview, NJ

- Engineered a React inquiry dashboard with real-time updates and automated routing, reducing ticket triage time **17%** and first-contact resolution **12%**, enabling support team to handle **40+** additional inquiries/week and save **~$8K** annually.
- Redesigned navigation and responsive UI, increasing monthly organic traffic **8%** and inquiry-form submissions **15%**.
- Automated cleansing and validation for **10,000+** inventory records with Pandas pipelines.

PROJECTS

StrivoAI: Career Intelligence Platform | *TypeScript, React, Supabase, PostgreSQL, Docker, Stripe* — Oct. 2025 - Jun. 2026

- Architected a tier-aware, three-call parallel AI pipeline with schema validation, caching, and async fallback, reducing average resume-analysis latency **62%** from **~110s** to **~42s** while keeping estimated cost below **$0.10** per analysis.
- Built and production-hardened **5** AI career workflows across **41** Supabase Edge Functions, adding secure authentication, recoverable background jobs, replay-safe Stripe billing, and a **7**-stage CI/CD gate covering **3,000+** automated test cases.

Minecraft Enchantment Calculator | *Python, Flask, JavaScript, Tailwind CSS* — May 2025 - Aug. 2025

- Architected a memoized recursive optimizer delivering enchantment sequences in **~20ms**, generating **2.8M+** Google Search Console impressions at **8%** CTR.

Rate Limiter Library | *C++, C API, CMake, GoogleTest, Google Benchmark* — Aug. 2025 - Sep. 2025

- Developed an in-process, lock-free rate limiter using a sharded token bucket architecture that achieves up to **75.7M** ops/sec, outperforming standard single-node Redis by up to **375×** while achieving processing latency of < **39ns**.

Image Quality Gate | *Python, FastAPI, OpenCV, NumPy, Docker* — May 2025 - Jun. 2025

- Built a REST microservice for blur and brightness validation sustaining **100+** requests/sec at **30-60** ms median latency.
- Added Prometheus observability, Docker packaging, and GitHub Actions CI/CD for reliable deployment.

Concurrent Key-Value Server | *Python, TCP Sockets, Multithreading, File I/O* — Mar. 2025 - Apr. 2025

- Built a multithreaded TCP client-server key-value store with a custom SET/GET/REMOVE/PRINT protocol; protected shared state with threading.RLock and persisted data across restarts.

ACTIVITIES

UCI ICS Student Council Hackathon | *Python, Django, Supabase, Docker* — Oct. 2025 - Nov. 2025

- Led **4** engineers to ship a campus activities map in **5 days**; built a Django REST API supporting **500+** concurrent users.
- Designed indexed Supabase tables that reduced query latency **60%** (**250** ms to **100** ms).

TECHNICAL SKILLS

Languages: Python, C++, JavaScript/TypeScript, SQL/PostgreSQL
Backend & Data: Django, FastAPI, Node.js, Supabase, Pandas, NumPy
Frontend & UI: React, Next.js, Tailwind CSS
DevOps & Testing: Docker, GitHub Actions, CMake, GoogleTest, Prometheus
